

Name: Tyler

In **one** sentence, summarize the general idea of the article.

Scientists are using gene editing to splice elephant and mammoth genes.

How do you think most people feel about this topic?

People probably think that it is unnatural because of gene editing. That it should not be done because it could be turned into a weapon or something along those lines.

How do you feel about this topic? Do you think you feel the same way as most people?

I like the scientific advancements in the field of gene editing. Most scientists working in this field might. They also might view it as unethical like most gene editing projects done on mammals.

Synthesize: In what ways could this technology be helpful in other ways?

It could be used for growing organs that can be used for organ transplants in humans. I can also be used in humans as a forced evolution.
